

This book is compiled from work and experiences of a number of years of teaching Cell Biology, Genetics and Molecular Biology. Thus, the content included is attested practices written with a practical bio-production approach. It comes in form of precise notes that are recommended reference to those people who are beginning and also advancing their careers in biotechnology practice. Moreover, students and researchers who wish to put biotechnology into practice will find this book a very valuable resource. The book mainly, dowels on cell culture and cellular bio-engineering which purposely written for greater understanding of cellular products.

The Cell Bio-Engineering

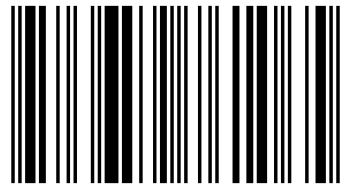

Paul Nthakanio

The Cell Bio-engineering: Biotechnology Practice Notes

Dr. Paul Njiruh Nthakanio, PhD in Genetics and Plant Breeding (Zhejiang University), Formerly Lecturer of Molecular Biology at Technical University of Kenya and currently a Senior Lecturer at Embu University College (Kenya).

978-3-659-76106-5
